Q & A

OMV is a global **energy and chemicals group**. We aim to become a **leading integrated sustainable chemicals, fuels and energy company** by 2030.

Sustainability and circular economy solutions are at the core of our strategy. Our goal is to be **climate neutral by 2050** at the latest.

Employees

One of the largest
industrial companies
in Austria

Fully integrated with expertise along the entire value chain

Diverse Pipeline of Ideas within Empower AI Program

Building from inspiration from individual use-cases lead to standardization of patterns, which by now can be delivered from a platform

 2025 focus

Use Case → Product → Platform

Discovery & first impact

Q & A

Platform Ambition

Central Element that Fosters Autonomy

Success Factors

- Componentization
- Separating commodity from differentiators
- Building Economies of Speed on Economies of Scale
- Centralizing Decentralization

“If your users haven’t built something that surprised you, you probably didn’t build a platform.”

Gregor Hohpe, Platform Strategy

07

Q & A

Our Approach

- Federated AI product development teams throughout the IT organizations
- Central Platform Team (serves as CoE and enabler)
- Central AI solutions Pipeline Funnel
- Implement Communities of Practice to facilitate adoption
- Enable AI engineers

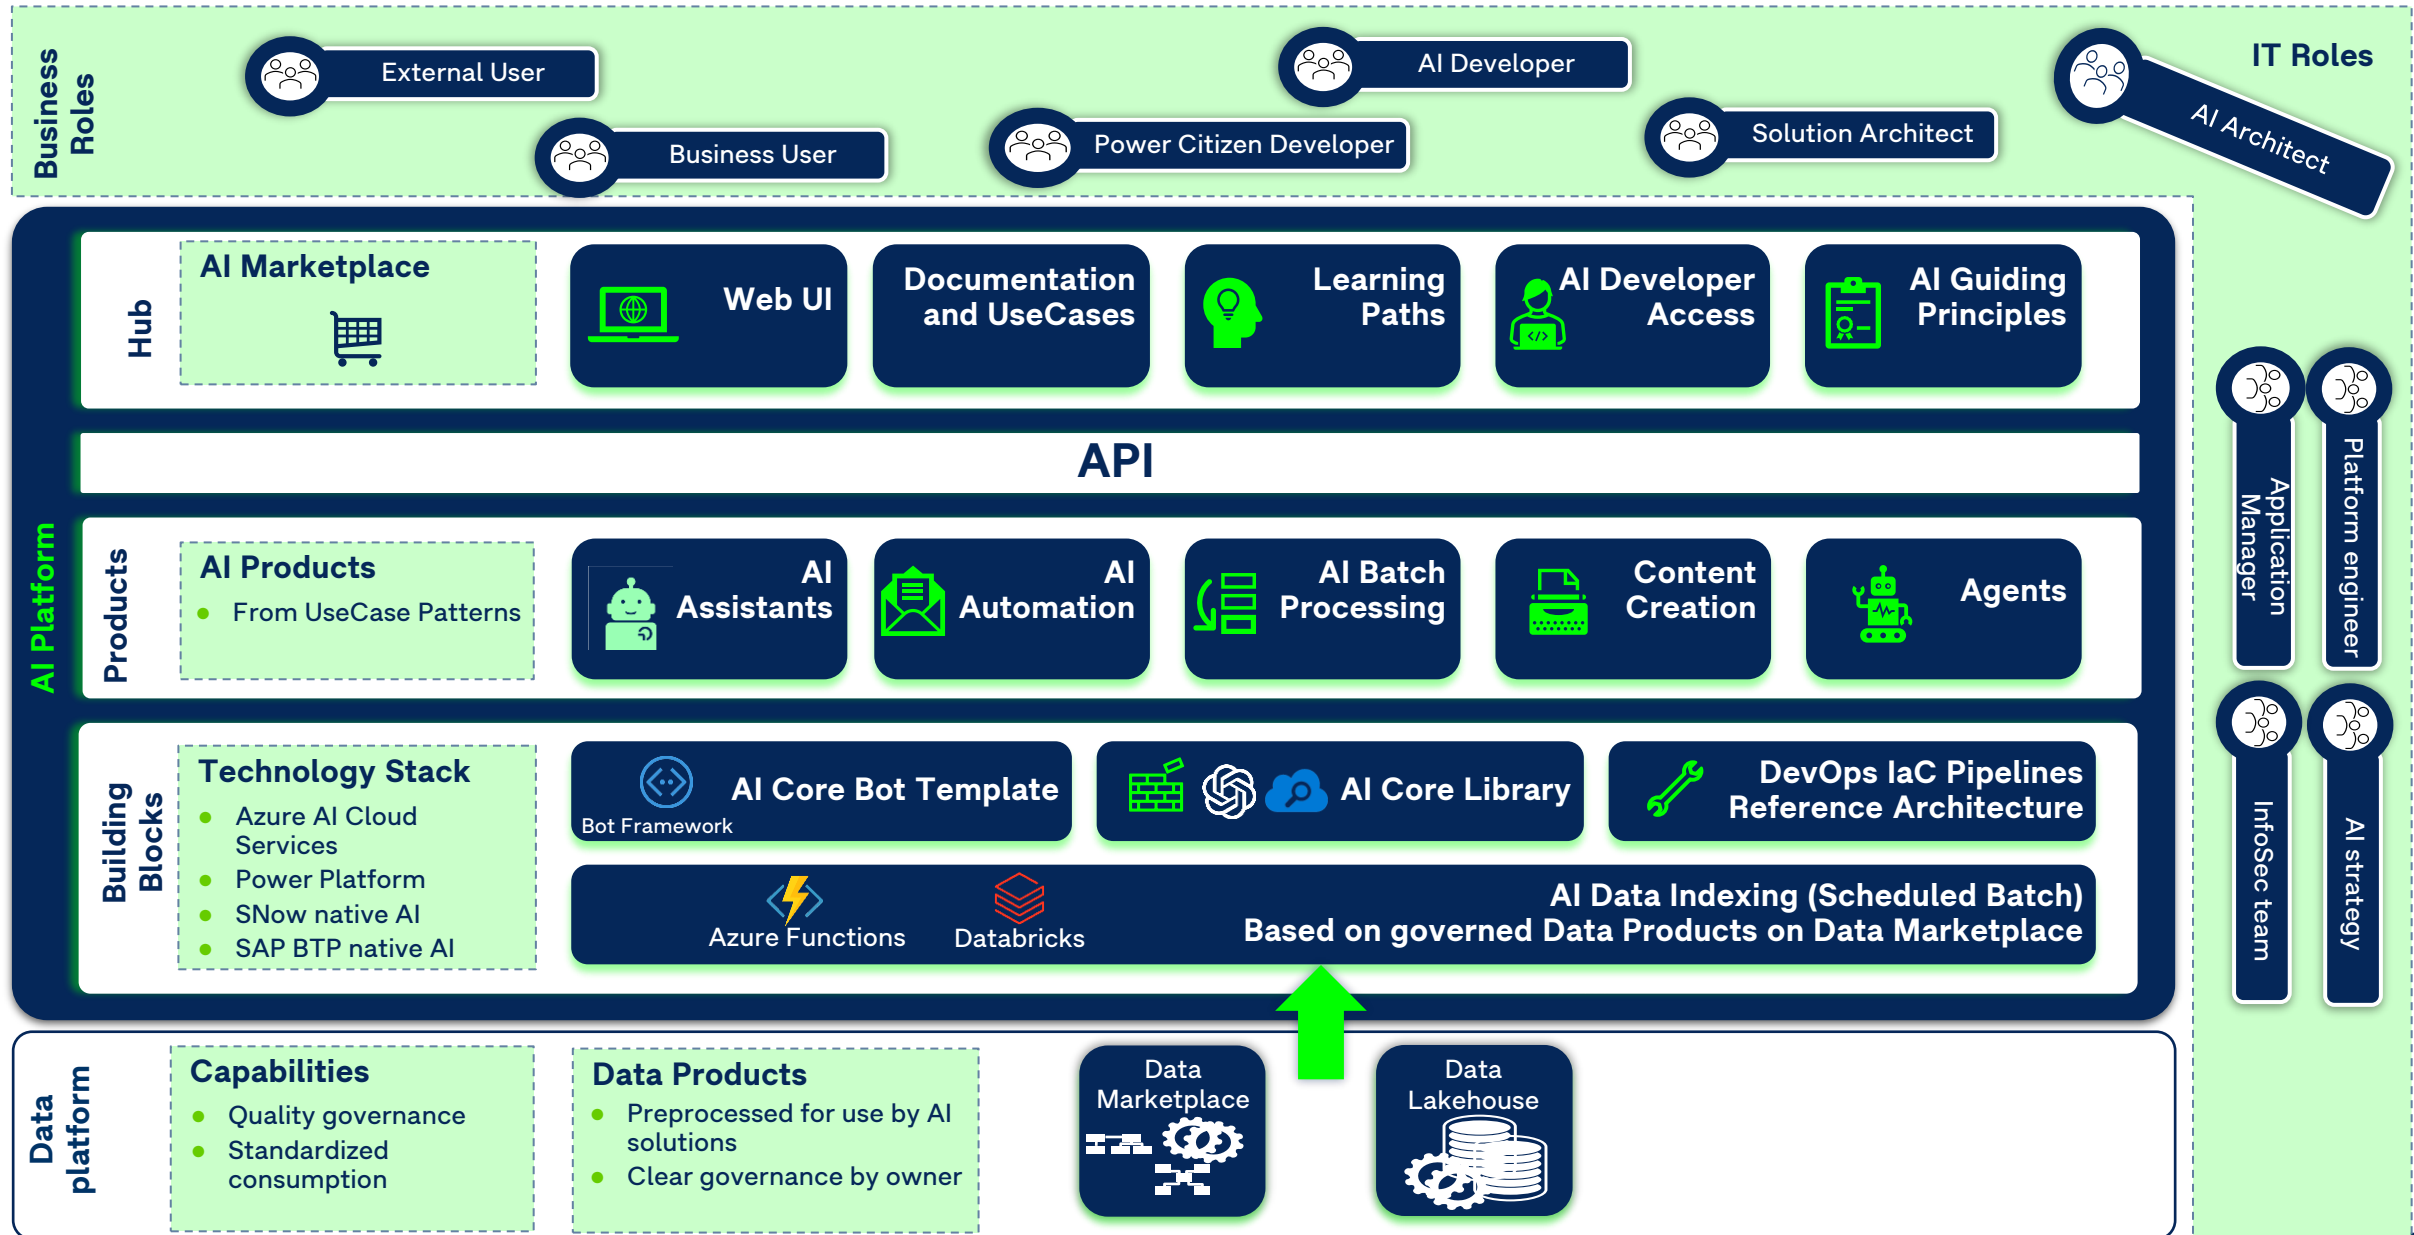

Enablement

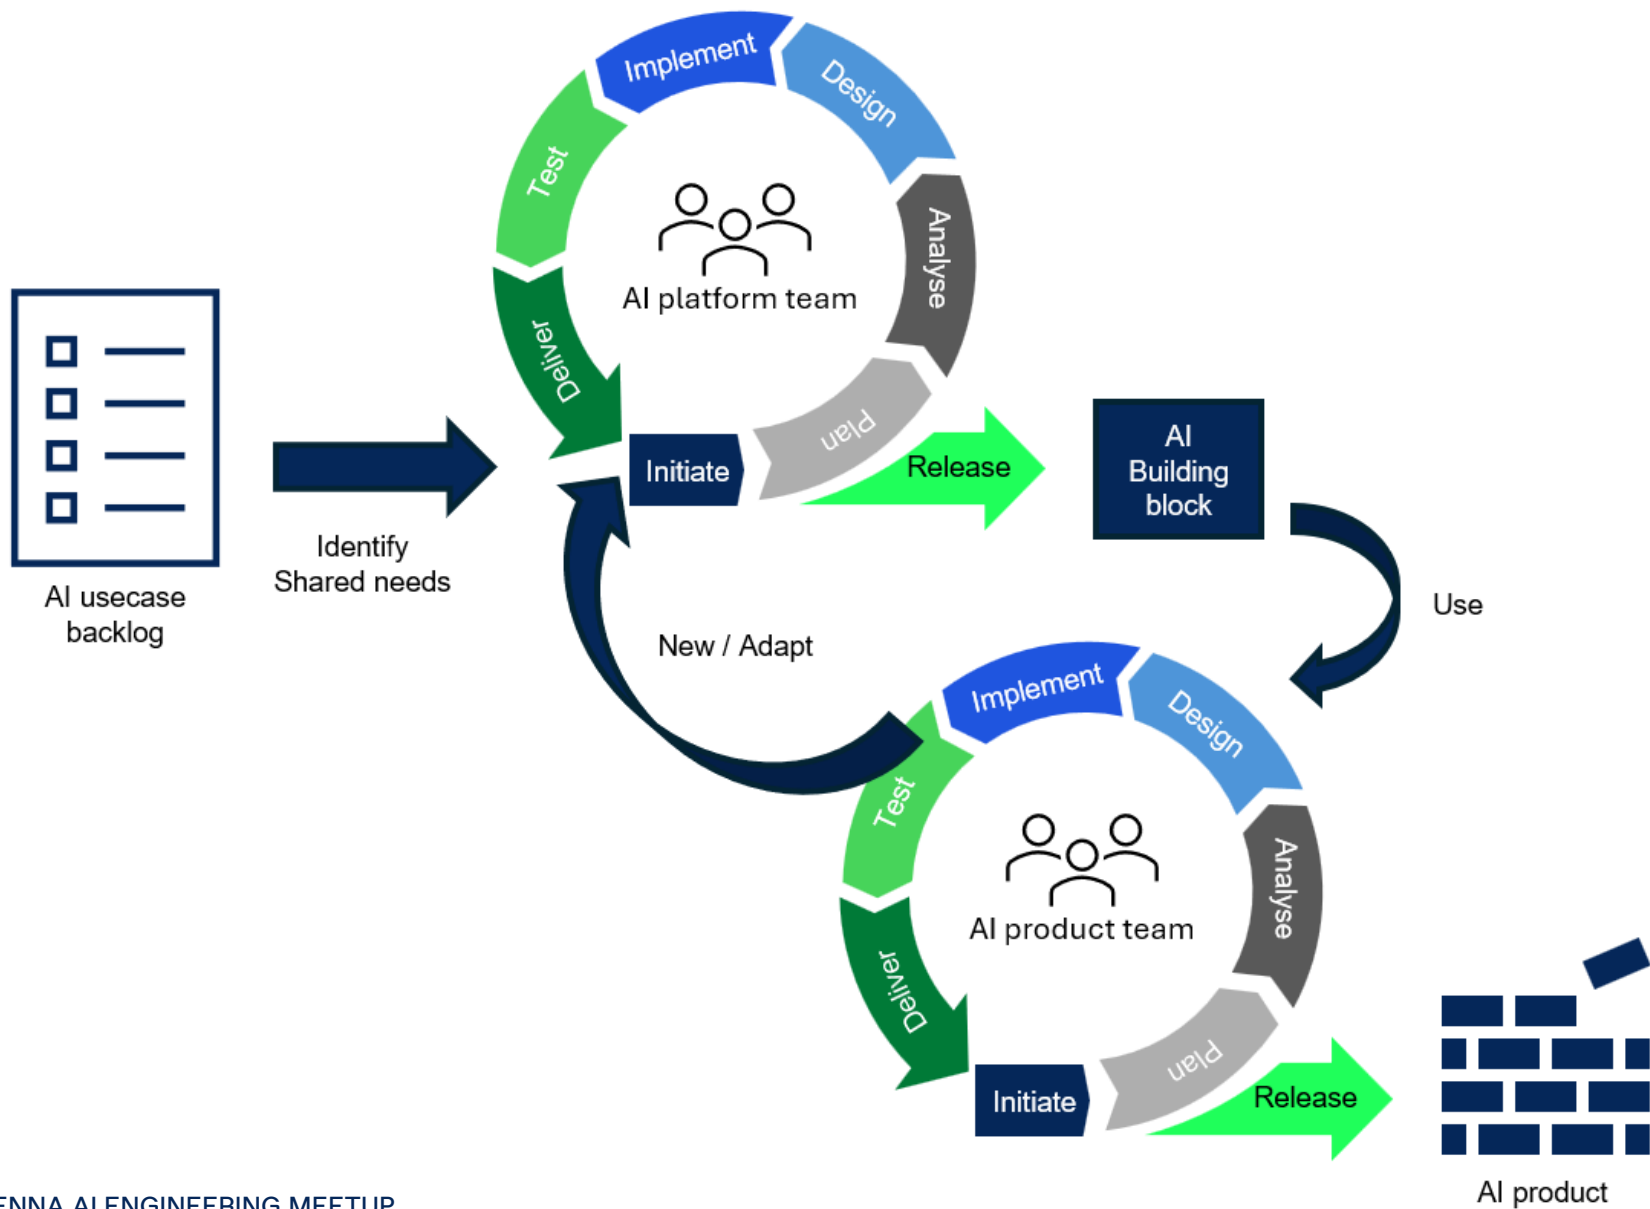

- Central documentation
- Learning paths
- Design guidelines
- Compliant reference architectures with **laC**
- Scaffolding templates

AI product

AI Hub Motivation: have a single entry-point, while reaping the benefits of a platform – Go-Live to OMV Group 27.02.

OMV Employee

Single entry point for end-users to use & discover AI

Access to OMVicky GPT, AI in-house built applications, prompt library, training materials and FAQs

Pro Developer

Enablement for pro developers through advanced tools

Accelerate the development of AI use cases from the existing infrastructure and platform around AI.

Platform benefits

Standardization

Scalability

Faster time to market

Quicker onboarding

Q & A

Important Platform Building Blocks

- AI Hub (with Starter Kit for Frontend Dev)
- AI core library
- AI core bot template
- AI content extractor
- AI indexer
- AI web scraper
- Reference Architectures (with IaC)
- ...

Upcoming

- Agentic orchestration
- Batch document analyzer

AI Technologies Used (for Developers)

- (Multi-modal) Large Language Models
- Embedding Models
- Vector Databases
- Rerankers
- Document Intelligence Services
- Other Azure cognitive services
- ...

(Multi-modal) LLMs

e.g. GPT 4o, o3-mini, coming: 4.5, 4.1, o4
supported by: Semantic Kernel (incl.
agentic orchestration and AI memory)

Embeddings

e.g. ADA, 3-large
supported by: Semantic Kernel

Vector Databases

e.g. Azure AI Search, Azure SQL
supported by: Semantic Kernel

Rerankers

e.g. Cohere Rerank v3

Building Blocks and
Technologies Overview

06

Challenges and Takeaways

07

Q & A

Challenges

We faced and are still facing several challenges in our AI platform and generally in our AI journey

Identifying new Platform Building Blocks

Analysing reoccurring patterns in product design and implementation

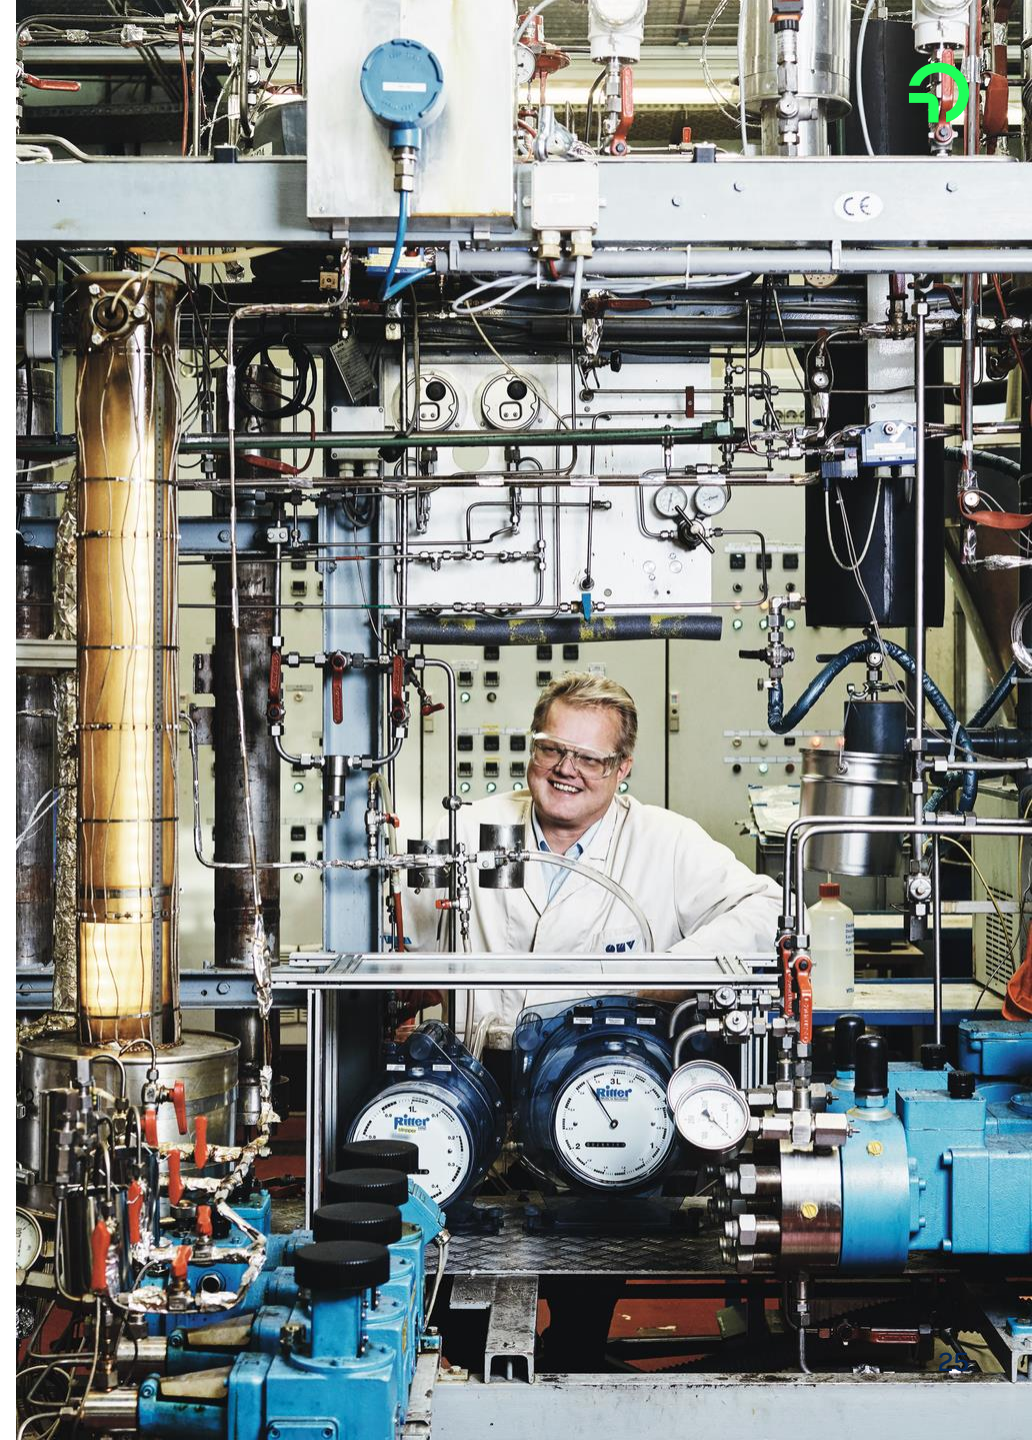

Decide whether to create building blocks vs. wait for low-code/native solutions, keyword “floating platform”

Lifecycle management of AI building blocks and frontends

Rolling out/deprecating building block versions, frontend components (in a micro frontend approach)

Managing external AI product development teams and solution architects

Onboarding, coordination, communication, development guidelines, reference architectures

Key Takeaways

- A self-service platform approach is key to speed through scale
- Create reference architectures from reoccurring infrastructure patterns
- Create building blocks to reuse code
- Evaluate carefully in which building blocks to invest (and when)
- Enable federated development teams using a central platform (centralize decentralization)
- The platform team must play an enablement role (optimally diminishing with time and platform maturity)
